

Let the client create the page. You manage it.

Facebook checks where a Page is created from. The safest Page is the one the client builds at home — with you on the admin list.

THE HANDOFF

1**The client creates it**

From their own end, in their own country.

**2****You request access**

They add you as a Page admin or editor.

**3****You manage it**

Publish, reply, boost and report from then on.

WHY THE CLIENT CREATES THE PAGE

Facebook checks where you are before it checks who you are.

01

Location and IP

Meta reads the location and IP address of whoever creates the Page.

02

A mismatch

A U.S. business built from the Philippines looks out of place.

03

Suspicious activity

The account gets flagged before the work even starts.

Worst case

Access is limited

Facebook can restrict what you can see or do.

Features are disabled

Page tools can be switched off for the account.

Verification is requested

Waiting on ID can delay the whole project.

Key idea

The Page must look local to Facebook.

A Page created from the wrong country is slow, restricted and hard to explain to a client. Two minutes of setup saves a week of support.

THE SAFE HANDOFF

Who does what, and in which order.

THE CLIENT DOES

- 1 Opens Create a Page**
On their own device, on their own network.
- 2 Adds the basics**
Name, category, logo, cover photo, contact details.
- 3 Publishes it**
The Page goes live from the country it belongs to.

YOU DO

- 1 Ask for admin access**
Request Page admin or editor access once it exists.
- 2 Coach the setup**
Walk them through it on a video call, or send written steps.
- 3 Take it from there**
Manage, publish and report without ever creating it.

Remember

A video call is a professional touch.

Never create a client's Page on their behalf. Ask them to create it, then request the access you need to do the job properly.

WHAT IS A VPN?

A VPN makes your login look like it came from home.

THE DEFINITION

VPN Virtual Private Network

- 1 Hides your real location**
Facebook sees the server location, not yours.
- 2 Secures the connection**
Your traffic is encrypted while you work.

What Facebook sees

Where you actually are

The Philippines

What Facebook sees

The United States

Key idea

Choose a server in the client's country.

Sitting in Manila with a U.S. server is the whole point: Facebook sees a local login, so it never raises a flag.

WHY AND WHEN TO USE ONE

Facebook is strict about where you log in.

What Facebook may do

Flag it as suspicious

The login is marked as unusual activity.

Lock the account

Even a temporary lock stops your work.

Ask for ID

You may have to prove who you are.

Block features

Some Page tools stop working for you.

When to use one

1

Creating a Page for a client abroad

The very first login is the one Facebook watches most closely.

2

Running ads or connecting Business Manager

Ad accounts and Business Manager trigger the same location checks.

3

Opening a client's account for the first time

One clean, local login sets the tone for every login after it.

STEPS 1 TO 3

Start the Page the right way.

Each field is a decision the client makes once, and then never has to make again.

1	Access the Create a Facebook Page section	Section	Navigate to the Create a Facebook Page section.
		Page name	The business name, or one people will recognise.
		Category	The category that best describes the business.
2	Enter your Page information	Description	A brief description of the business (optional).
3	Add profile and cover photos	Profile picture	Upload the business logo, or a relevant image.
		Cover photo	An image that represents the brand or its products.

STEPS 4 TO 6

Finish the details, then go live.

Everything here is one-time setup. The maintenance is your job after Publish.

4 Complete your Page details

Phone number

Email address

Website

Business location

Hours of operation

5 Customize your Page

Username (optional)

Call-to-action button

Book Now

Contact Us

6 Publish your Page

Once everything is added, click Publish. Your Page is live.

PRO TIPS

Three habits that protect the work.

01**Consistency**

Keep your Page information identical across every online profile.

02**Engagement**

Post updates regularly and reply to build a real community.

03**Insights**

Track Page performance and make decisions from the data.

Your turn

Setup is one afternoon. Management is the job.

A Page that only exists is not a Page that works. Post, reply, and check the numbers — the client hired you for the management, not the setup.
