

Read the numbers, then change the content.

Analytics is collecting and analysing data from the platforms to judge performance and inform strategy — nothing more, nothing less.

REACH · IMPRESSIONS · ENGAGEMENT RATE · CLICKS

WHAT YOU WILL LEARN

- 1 Reach versus impressions
- 2 The seven key metrics
- 3 Reading Insights
- 4 Reading your audience
- 5 Content, ads and export
- 6 Turning data into action

REACH VERSUS IMPRESSIONS

Two numbers that look identical and are not.

Reach

The number of times your post is seen by individual users. Each person is counted once, however many times or on however many devices they see it.

Impressions

The number of times your post is displayed on screen. It counts every view, even when the same person is counted again.

ENGAGEMENT RATE

$$\text{Engagement} \div \text{Reach} \times 100$$

The percentage of people who saw the post and interacted with it. It is the one figure that tells you whether the content itself worked.

Key idea

Counted once, or counted every time?

Reach and impressions measure eyes. Engagement rate measures whether anything actually happened — judge the content on that one.

THE KEY METRICS

Seven numbers to define as your KPIs.

METRIC	WHAT IT COUNTS
Reach	Individual users who saw the post. Each user is counted once.
Impressions	Every time the post is displayed on screen, repeats included.
Engagement	Total interactions: likes, comments, shares and clicks.
Engagement rate	The share of people who saw the post and interacted.
Link clicks	The number of times the link in your post was clicked.
Post saves	The number of times users saved the post.
Video views	The number of times the video was viewed.

Remember

Track all seven, but decide which one decides. A VA who can name the metric that matters can defend every post in the calendar.

INSIGHTS: THE OVERVIEW

Start with the last 28 days.

WHAT THE OVERVIEW GIVES YOU

- 1 A chosen period**
Assess performance over a selected period, such as the last 28 days.
- 2 Three headline figures**
Reach, interactions and follows.
- 3 An export**
Results lets you customise the date range and format (PNG, PDF).

Key idea

Pick the window before you read the numbers.

Twenty-eight days is the default window because it covers a full month of your own posting. Compare like with like.

AUDIENCE INSIGHTS

Who is actually paying attention.

01**Age and gender**

The two demographic cuts Meta reports for every audience.

02**Top cities**

Where your audience is based, ranked by share.

03**Follower trends**

Followers, engaged followers, messaging contacts and unfollows over time.

04**Most active times**

The windows when your followers are online and most likely to engage.

WHY IT CHANGES YOUR PLAN

If your audience is mostly active at 8pm, a 9am post is working against you. Demographics tell you who to talk to; active times tell you when to say it.

Remember

Who they are, and when they are listening.

Check the audience tab before the content tab. It changes what you post, not just when you post it.

CONTENT AND ADS

Paid reach, organic reach, and the sheet behind them.

CONTENT ANALYSIS

- **Judge every format**
Reels, stories, photos and videos each carry their own reach, watch time, average watch time, interactions and link clicks.
- **Total reach is a sum**
Paid reach plus organic reach, not one or the other.

Reach

Watch time

Avg watch time

Interactions

Link clicks

PULLING THE RAW DATA

- 1 **Go to contents**
Inside Meta Business Suite.
- 2 **Filter for all posts**
Set the filter so nothing is left out.
- 3 **Create the Excel sheet**
It is generated for further analysis of the data.

Key idea

The sheet is where the pattern hides.

Averages hide more than they reveal. Sort the sheet, find the outlier, and rebuild that post.

TURNING DATA INTO DECISIONS

What you do on Monday morning.

01

Pick the window

Compare the same 28-day period against the one before it.

02

Find the outlier

Sort the sheet by engagement rate, not by reach.

03

Change one thing

Adjust the content strategy based on the data.

04

Re-measure

Check the same metric again next month.

High engagement rate

The content resonates. Make more of the same format.

High reach, low engagement

People saw it and did nothing. Change the content, not the timing.

Low reach, high engagement

The right message, the wrong audience. Fix the distribution.

Pro tip

Engagement rate is the number that decides.

Focus on engagement rate. High engagement rates indicate the content resonates — adjust your content strategy accordingly.

SYNTHESIS

From raw numbers to a better calendar.

01**Define your KPIs**

Reach, impressions, engagement, engagement rate, link clicks, saves and video views — know which one decides for this client.

02**Read the Overview**

Last 28 days for reach, interactions and follows, exported through Results as PNG or PDF.

03**Read the audience**

Age, gender, top cities, follower trends and the times your followers are most active.

04**Analyse the content**

Compare every post, separate paid from organic reach, and export the sheet.

Your turn

Analytics only pays when it changes something. Bring one number and one change to your next client call.
